

Dear Members of the Admissions Committee,

I am writing in support of Loukas Mertzanis's application to the MSc in Advanced Cybersecurity Technologies and Governance at the University of Piraeus.

As Chief Technology Officer at Clicks, I have worked closely with Loukas and seen him take substantial responsibility for the architecture, implementation, security, and operation of our platform.

Loukas has implemented and secured a significant part of our platform, working across system architecture, cloud and platform engineering, software delivery, and operational reliability.

He can understand complex requirements, identify the most important technical and security risks, and guide solutions through to implementation while considering how platform components interact, where trust boundaries exist, how failures can be detected, and how systems can be operated safely.

He combines hands-on execution with sound technical judgement and takes an end-to-end view of platform quality.

Loukas already has extensive practical experience in cloud-native infrastructure, platform engineering, CI/CD, automation, and software systems.

The MSc will give him deeper and more systematic knowledge of security architecture, threat analysis, risk, and governance, strengthening the value he brings to our business.

I fully support Loukas's application and believe he will be an excellent addition to the programme.

Sincerely,

Oliver Knapp

Chief Technology Officer, Clicks
